| for immunomodulatory and               | blood disorders (e.g., as described    |
| differentiation factor proteins        | below under "Immune Activity",         |
| produced by a large variety of cells   | "Blood-Related Disorders", and/or      |
| where the expression level is strongly | "Cardiovascular Disorders"), and       |
| regulated by cytokines, growth         | infection (e.g., as described below    |
| factors, and hormones are well         | under "Infectious Disease"). Highly    |
| known in the art and may be used or    | preferred indications include          |
| routinely modified to assess the       | autoimmune diseases (e.g.,             |
| ability of polypeptides of the         | rheumatoid arthritis, systemic lupus   |
| invention (including antibodies and    | erythematosis, multiple sclerosis      |
| agonists or antagonists of the         | and/or as described below) and         |
| invention) to mediate                  | immunodeficiencies (e.g., as           |
| immunomodulation and                   | described below). Highly preferred     |
| differentiation and modulate T cell    | indications also include boosting a B  |
| proliferation and function.            | cell-mediated immune response and      |
| Exemplary assays that test for         | alternatively suppressing a B cell-    |
| immunomodulatory proteins evaluate     | mediated immune response. Highly       |
| the production of cytokines, such as   | preferred indications include          |
| IL-6, and the stimulation and          | inflammation and inflammatory          |
| upregulation of T cell proliferation   | disorders. Additional highly preferred |
| and functional activities. Such        | indications include asthma and         |
| assays that may be used or routinely   | allergy. Highly preferred indications  |
| modified to test immunomodulatory      | include neoplastic diseases (e.g.,     |
| and diffferentiation activity of       | myeloma, plasmacytoma, leukemia,       |
| polypeptides of the invention          | lymphoma, melanoma, and/or as          |
| (including antibodies and agonists or  | described below under                  |
| antagonists of the invention) include  | "Hyperproliferative Disorders").       |
| assays disclosed in Miraglia et al., J | Highly preferred indications include   |
| Biomolecular Screening 4:193-          | neoplasms and cancers, such as,        |
| 204(1999); Rowland et al.,             | myeloma, plasmacytoma, leukemia,       |
| "Lymphocytes: a practical approach"    | lymphoma, melanoma, and prostate,      |
| Chapter 6:138-160 (2000); and          | breast, lung, colon, pancreatic,       |
|                                        |                                        |

|     |         |     |                             | Verhasselt et al., I Immunol circusses of each of which are been of each of which are been of each of which are been entirely. Human dendritic cells that entirely. Human dendritic cells that may be used according to these assays may be isolated using using the entirely. Human dendritic or of the entirely estimated side edged been or otherwise known in the art. Human dendritic cells are antigen presenting except in supersions culture, which, when activated by antigen and/or exclusive standard and underly destinated and unde | esoplageal, stomach, brain, liver and mindro cancer (Other preferred indications include being in micro cancer (Other preferred indications include being in coopilisative cloudification and pre- neoplastic conditions, such as, for example, hypophilasin, metaplasin, and ord sysplasin, Preferred in microtical profiles and ord sysplasin, Preferred in microtical profilesian, preferred in microtical profilesian, preferred in microtical profilesian, preferred in practical proposition, ledskopenia, themmosyspornia, ledskopenia, themmosyspornia, ledskopenia, forth, multiple enycloma, Burktet's granthormator disease, neurophilia, AIDS, granthormator disease, profilesia, neurophilia, posticiasis, suppression or demogration of states, hemophilia, and copiens and itsues, hemophilia, and Lyme endocardiis meningiis, nd Lyme endocardiis meningiis, and Lyme endocardiis meningiis, and Lyme endocardiis meningiis, and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lyme endocardiis meningiis and Lym |

|     |         |     |                       | which are herein incorporated by        | disorders and pre-neonlastic            |
|     |         |     |                       | reference in its entirety. T cells that | conditions such as for example          |
|     |         |     |                       | may be used according to these          | hynemiasia metanjasia and/or            |
|     |         |     |                       | assays are publicly available (e.g.,    | dysplasia. Preferred indications        |
|     |         |     |                       | through the ATCCTM). Exemplary          | also include anemia, pancytopenia,      |
|     |         |     |                       | human T cells that may be used          | leukopenia, thrombocytopenia,           |
|     |         |     |                       | according to these assays include the   | Hodgkin's disease, acute                |
|     |         |     |                       | JURKAT cell line, which is a            | lymphocytic anemia (ALL),               |
|     |         |     |                       | suspension culture of leukemia cells    | plasmacytomas, multiple myeloma,        |
|     |         |     |                       | that produce IL-2 when stimulated.      | Burkitt's lymphoma, arthritis, AIDS,    |
|     |         |     |                       |                                         | granulomatous disease, inflammatory     |
|     |         |     |                       |                                         | bowel disease, sepsis, neutropenia,     |
|     |         |     |                       |                                         | neutrophilia, psoriasis, suppression    |
|     |         |     |                       |                                         | of immune reactions to transplanted     |
|     |         |     |                       |                                         | organs and tissues, hemophilia,         |
|     |         |     |                       |                                         | hypercoagulation, diabetes mellitus,    |
|     |         |     |                       |                                         | endocarditis, meningitis, Lyme          |
|     |         |     |                       |                                         | Disease, asthma and allergy.            |
|     | HNHOD46 | 571 | Activation of         | This reporter assay measures            | Highly preferred indication includes    |
| 167 |         |     | transcription through | activation of the NFkB signaling        | allergy, asthma, and rhinitis.          |
|     |         |     | NFKB response         | pathway in Ku812 human basophil         | Additional highly preferred             |
|     |         |     | element in immune     | cell line. Assays for the activation of | indications include infection (e.g., an |
|     |         |     | cells (such as        | transcription through the NFKB          | infectious disease as described below   |
|     |         |     | basophils).           | response element are well-known in      | under "Infectious Disease"), and        |
|     |         |     |                       | the art and may be used or routinely    | inflammation and inflammatory           |
|     |         |     |                       | modified to assess the ability of       | disorders. Preferred indications        |
|     |         |     |                       | polypeptides of the invention           | include immunological and               |
|     |         |     |                       | (including antibodies and agonists or   | hempatopoietic disorders (e.g., as      |
|     |         |     |                       | antagonists of the invention) to        | described below under "Immune           |
|     |         |     |                       | regulate NFKB transcription factors     | Activity", and "Blood-Related           |
|     |         |     |                       | and modulate expression of              | Disorders"). Preferred indications      |
|     |         |     |                       | immunomodulatory genes.                 | also include autoimmune diseases        |
|     |         |     |                       | Exemplary assays for transcription      | (e.g., rheumatoid arthritis, systemic   |
|     |         |     |                       | through the NFKB response element       | lupus erythematosis, multiple           |
|     |         |     |                       | that may be used or rountinely          | sclerosis and/or as described below)    |

| and immunodeliciencies (e.g., as and and immunodeliciencies (e.g., as indicated below). Performed indications also include tooplastic diseases (e.g., localiumi, laypidoma, medianoma, and ora se described below mader "Hyperpolicitative Diseasedes"). Preferred indications and one "Physiolicitative Diseasedes"). Preferred indications and indicate tooplastics and easers, and the companion, and prostact, breast, lung, colon, pancrettic, breast, lung, colon, pancrettic, breast, lung, colon, pancrettic, urimay uned cancers and as described below under "Hyperprolificative Disearders".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Highly preferred indications include reophastic diseases (e.g. Hermit, hyphomota, and/or as described below under estable pleow under "Hyperproliferative Disorders")  "Hyperproliferative Disorders")  Highly preferred indications include morphisms and entores, such as, for example, leukeruni, lymphoma (e.g., Teell lymphoma, Burktif's French Pumphoma, Hurktif's hymphoma, Herdgiff's disease), hymphoma, Herdgiff's disease).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Disorders", and/or "Blood-Related<br>Disorders"), and infection (e.g., an | infectious disease as described below | under infectious Disease ), ruginy<br>preferred indications include | autoimmune diseases (e.g.,           | rheumatoid arthritis, systemic lupus | erythematosis, multiple sclerosis | and/or as described below) and | immunodeficiencies (e.g., as          | described below). Additional highly   | preferred indications include      | inflammation and inflammatory   | disorders. Highly preferred | indications also include neoplastic  | diseases (e.g., leukemia, lymphoma, | and/or as described below under      | "Hyperproliferative Disorders"). | Highly preferred indications include | neoplasms and cancers, such as,    | leukemia, lymphoma, prostate,       | breast, lung, colon, pancreatic,      | esophageal, stomach, brain, liver,   | and urinary cancer. Other preferred | indications include benign     | dysproliferative disorders and pre-  | neoplastic conditions, such as, for | example, hyperplasia, metaplasia, | and/or dysplasia. Preferred           | indications include arthritis, asthma, | AIDS, allergy, anemia, pancytopenia, | leukopenia, thrombocytopenia, | Hodgkin's disease, acute | lymphocytic anemia (ALL), | plasmacytomas, multiple myeloma, | Burkitt's lymphoma, granulomatous | disease, inflammatory bowel disease, |
| (including antibodies and agonists or<br>antagonists of the invention) to | modulate growth and other cell        | transcription through the AP1                                       | response element that may be used or | routinely modified to test AP1-      | response element activity of      | polypeptides of the invention  | (including antibodies and agonists or | antagonists of the invention) include | assays disclosed in Berger et al., | Gene 66:1-10 (1988); Cullen and | Malm, Methods in Enzymol    | 216:362-368 (1992); Henthorn et al., | Proc Natl Acad Sci USA 85:6342-     | 6346 (1988); Rellahan et al., J Biol | Chem 272(49):30806-30811 (1997); | Chang et al., Mol Cell Biol          | 18(9):4986-4993 (1998); and Fraser | et al., Eur J Immunol 29(3):838-844 | (1999), the contents of each of which | are herein incorporated by reference | in its entirety. Human T cells that | may be used according to these | assays are publicly available (e.g., | through the ATCCTM). Exemplary      | human T cells that may be used    | according to these assays include the | SUPT cell line, which is an IL-2 and   | IL-4 responsive suspension-culture   | cell line.                    |                          |                           |                                  |                                   |                                      |
|                                                                           |                                       |                                                                     |                                      |                                      |                                   |                                |                                       |                                       |                                    |                                 |                             |                                      |                                     |                                      |                                  |                                      |                                    |                                     |                                       |                                      |                                     |                                |                                      |                                     |                                   |                                       |                                        |                                      |                               |                          |                           |                                  |                                   |                                      |

|     |         |     |                          | 844 (1999), the contents of each of     | as,melanoma, renal cell carcinoma,    |
|     |         |     |                          | which are herein incorporated by        | leukemia, lymphoma, and prostate,     |
|     |         |     |                          | reference in its entirety. T cells that | breast, lung, colon, pancreatic,      |
|     |         |     |                          | may be used according to these          | esophageal, stomach, brain, liver and |
|     |         |     |                          | assays are publicly available (e.g.,    | urinary cancer. Other preferred       |
|     |         |     |                          | through the ATCCTM). Exemplary          | indications include benign            |
|     |         |     |                          | human T cells that may be used          | dysproliferative disorders and pre-   |
|     |         |     |                          | according to these assays include the   | neoplastic conditions, such as, for   |
|     |         |     |                          | SUPT cell line, which is a suspension   | example, hyperplasia, metaplasia,     |
|     |         |     |                          | culture of IL-2 and IL-4 responsive T   | and/or dysplasia. Preferred           |
|     |         |     |                          | cells.                                  | indications also include anemia,      |
|     |         |     |                          |                                         | pancytopenia, leukopenia,             |
|     |         |     |                          |                                         | thrombocytopenia, Hodgkin's           |
|     |         |     |                          |                                         | disease, acute lymphocytic anemia     |
|     |         |     |                          |                                         | (ALL), plasmacytomas, multiple        |
|     |         |     |                          |                                         | myeloma, Burkitt's lymphoma,          |
|     |         |     |                          |                                         | arthritis, AIDS, granulomatous        |
|     |         |     |                          |                                         | disease, inflammatory bowel disease,  |
|     |         |     |                          |                                         | sepsis, neutropenia, neutrophilia,    |
|     |         |     |                          |                                         | psoriasis, hemophilia,                |
|     |         |     |                          |                                         | hypercoagulation, diabetes mellitus,  |
|     |         |     |                          |                                         | endocarditis, meningitis, Lyme        |
|     |         |     |                          |                                         | Disease, suppression of immune        |
|     |         |     |                          |                                         | reactions to transplanted organs,     |
|     |         |     |                          |                                         | asthma and allergy.                   |
|     | HNHOD46 | 571 | Activation of            | Assays for the activation of            | A highly preferred indication is      |
| 167 |         |     | transcription through    | transcription through the Signal        | allergy. Another highly               |
|     |         |     | STAT6 response           | Transducers and Activators of           | preferred indication is asthma.       |
|     |         |     | element in immune        | Transcription (STAT6) response          | Additional highly preferred           |
|     |         |     | cells (such as T-cells). | element are well-known in the art       | indications include inflammation and  |
|     |         |     |                          | and may be used or routinely            | inflammatory disorders.               |
|     |         |     |                          | modified to assess the ability of       | Preferred indications include blood   |
|     |         |     |                          | polypeptides of the invention           | disorders (e.g., as described below   |
|     |         |     |                          | (including antibodies and agonists or   | under "Immune Activity", "Blood-      |
|     |         |     |                          | antagonists of the invention) to        | Related Disorders", and/or            |

| "Cardiovascular Disorders"). Preferred indications include | autoimmme diseases (e.g.,        | rheumatoid arthritis, systemic lupus | erythematosis, multiple selerosis    | and/or as described below) and   | immunodeficiencies (e.g., as     | described below).             | Preferred indications include         | neoplastic diseases (e.g., leukemia,  | lymphoma, melanoma, and/or as      | described below under           | "Hyperproliferative Disorders"). | Preferred indications include        | neoplasms and cancers, such as, | leukemia, lymphoma, melanoma, and | prostate, breast, lung, colon,      | pancreatic, esophageal, stomach,     | brain, liver and urinary cancer. Other | preferred indications include benign | dysproliferative disorders and pre- | neoplastic conditions, such as, for   | example, hyperplasia, metaplasia, | and/or dysplasia.                       | Preferred indications include anemia, | pancytopenia, leukopenia,            | thrombocytopenia, Hodgkin's      | disease, acute lymphocytic anemia   | (ALL), plasmacytomas, multiple     | myeloma, Burkitt's lymphoma,           | arthritis, AIDS, granulomatous    | disease, inflammatory bowel disease, | sepsis, neutropenia, neutrophilia, | psoriasis, suppression of immune | reactions to transplanted organs and | tissues, hemophilia, | hypercoagulation, diabetes mellitus, |

| - 1- | includes a method for inhibiting                                              | adipocyte differentiation. A      | highly preferred embodiment of the | invention includes a method for | stimulating (e.g., increasing)        | adipocyte activation. An alternative  | highly preferred embodiment of the     | invention includes a method for | inhibiting the activation of (e.g., | decreasing) and/or inactivating | adipocytes. Highly preferred        | indications include endocrine     | disorders (e.g., as described below | under "Endocrine Disorders").    | Highly preferred indications also | include neoplastic diseases (e.g., | lipomas, liposarcomas, and/or as | described below under            | "Hyperproliferative Disorders").     | Preferred indications include blood | disorders (e.g., hypertension,       | congestive heart failure, blood vessel | blockage, heart disease, stroke,  | impotence and/or as described below | under "Immune Activity",           | "Cardiovascular Disorders", and/or | "Blood-Related Disorders"), immme      | disorders (e.g., as described below | under "Immune Activity"), neural     | disorders (e.g., as described below | under "Neural Activity and   | Neurological Diseases"), and        | infection (e.g., as described below | under "Infectious Disease"). | A highly preferred indication is | dishere mellime An additional |
|      | differentiation. Exemplary assays for<br>FRK kinase activity that may be used | or routinely modified to test ERK | kinase-induced activity of         | polypeptides of the invention   | (including antibodies and agonists or | antagonists of the invention) include | the assays disclosed in Forrer et al., | Biol Chem 379(8-9):1101-1110    | (1998); Le Marchand-Brustel Y, Exp  | Clin Endocrinol Diabetes        | 107(2):126-132 (1999); Kyriakis JM, | Biochem Soc Symp 64:29-48 (1999); | Chang and Karin, Nature             | 410(6824):37-40 (2001); and Cobb | MH, Prog Biophys Mol Biol 71(3-   | 4):479-500 (1999); the contents of | each of which are herein         | incorporated by reference in its | entirety. Mouse adipocyte cells that | may be used according to these      | assays are publicly available (e.g., | through the ATCCTM). Exemplary         | mouse adipocyte cells that may be | used according to these assays      | include 3T3-L1 cells. 3T3-L1 is an | adherent mouse preadipocyte cell   | line that is a continuous substrain of | 3T3 fibroblast cells developed      | through clonal isolation and undergo | a pre-adipocyte to adipose-like     | conversion under appropriate | differentiation conditions known in | the art.                            |                              |                                  |                               |
|      |                                                                               |                                   |                                    |                                 |                                       |                                       |                                        |                                 |                                     |                                 |                                     |                                   |                                     |                                  |                                   |                                    |                                  |                                  |                                      |                                     |                                      |                                        |                                   |                                     |                                    |                                    |                                        |                                     |                                      |                                     |                              |                                     |                                     |                              |                                  |                               |

| asthma, allergy, hypersensitivity | reactions, and inflammation.       | Preferred indications include        | infection (e.g., an infectious disease | as described below under "Infectious | Disease"), immunological disorders,   | inflammation and inflammatory    | disorders (e.g., as described below | under "Immune Activity", and | "Blood-Related Disorders"). | Preferred indications include      | autoimmme diseases (e.g.,         | rheumatoid arthritis, systemic lupus | erythematosis, multiple sclerosis | and/or as described below) and      | immunodeficiencies (e.g., as        | described below).                  |                                        |                                     |                             |                             |                                     |                                |                            |                                    |                                      |                                  |                                       |                                      |                                 |                                |                                      |                                   |                                |                                       |                                   |                                   |
| transcription through the NFKB    | response element are well-known in | the art and may be used or routinely | modified to assess the ability of      | polypeptides of the invention        | (including antibodies and agonists or | antagonists of the invention) to | regulate NFKB transcription factors | and modulate expression of   | immunomodulatory genes.     | Exemplary assays for transcription | through the NFKB response element | that may be used or rountinely       | modified to test NFKB-response    | element activity of polypeptides of | the invention (including antibodies | and agonists or antagonists of the | invention) include assays disclosed in | Berger et al., Gene 66:1-10 (1998); | Cullen and Malm, Methods in | Enzymol 216:362-368 (1992); | Henthorn et al., Proc Natl Acad Sci | USA 85:6342-6346 (1988); Valle | Blazquez et al, Immunology | 90(3):455-460 (1997); Aramburau et | al., J Exp Med 82(3):801-810 (1995); | and Fraser et al., 29(3):838-844 | (1999), the contents of each of which | are herein incorporated by reference | in its entirety. For example, a | reporter assay (which measures | increases in transcription inducible | from a NFkB responsive element in | EOL-1 cells) may link the NFKB | element to a repeorter gene and binds | to the NFKB transcription factor, | which is upregulated by cytokines |
| transcription through             | NFKB response                      | element in immune                    | cells (such as EOL1                    | cells).                              |                                       |                                  |                                     |                              |                             |                                    |                                   |                                      |                                   |                                     |                                     |                                    |                                        |                                     |                             |                             |                                     |                                |                            |                                    |                                      |                                  |                                       |                                      |                                 |                                |                                      |                                   |                                |                                       |                                   |                                   |

| endocarditis, meningitis, Lyme<br>Disease, and asthma and allergy. | A highly perfected enhodiment of the invention includes a mothod for increasing muscle cal survival An alacumist highly preferred and another of the invention includes a method for invention includes a method for deveraging muscle cell survival in A preferred muscle cell survival in A preferred muscle cell survival in A preferred muscle cell survival in A preferred muscle cell surfaction. In a specific embodiment of the invention includes a method for similating muscle cell politication. In a specific embodiment of the invention includes a method for inhibiting muscle cell politication is a specific embodiment of the A preferred embodiment of the A preferred embodiment of the A preferred embodiment of the Provincion includes a method for similating muscle cell politication is an specific embodiment of the invention includes a method for similating muscle cell differentiation is similated. An alternative highly preferred and includes a method for inhibiting embodiment, skeletal muscle cell differentiation is inhibited. Highly preferred indications includes a method for inhibiting muscle cell differentiation is inhibited. Highly preferred indications inhibited specific embodiment, skeletal muscle coll differentiation is inhibited. Highly preferred indications inhibited and alternative highly preferred indications inhibited and selected inferentiation is inhibited. Section of the invention includes a method for inhibiting section. Preferred indications inhibited and selected inferentiation is inhibited.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|-------------------------------------|--------------------------------------|---------------------------------------|---------------------------------|-------------------------------------|-------------------------------------|---------------------------------|---------------------------------|-----------------------------------|---------------------------------|-------------------------------------|------------------------------------|--------------------------------------|-----------------------------------|---------------------------------------|------------------------------------|-----------------------------------|--------------------------------------|-------------------------------------|----------------------------------|------------------------------------|-------------------------------------|------------------------------------|--------------------------------|-----------------------------------|-----------------------------------|--------------------------------|--------------------------------------|-----------------------------------|--------------------------------------|-------------------------------------|----------------------------------|--------------------------------------|----------------------|--------------------------------------|----|----------------------------------|
| neoplasms and cancers, such as, for | example, leukemia, lymphoma,         | melanoma, and prostate, breast, lung, | colon, pancreatic, esophageal,  | stomach, brain, liver and urinary   | cancer. Other preferred indications | include benign dysproliferative | disorders and pre-neoplastic    | conditions, such as, for example, | hyperplasia, metaplasia, and/or | dysplasia. Preferred indications    | include blood disorders (e.g., as  | described below under "Immune        | Activity", "Blood-Related         | _                                     | Disorders"). Preferred indications | include autoimmme diseases (e.g., | rheumatoid arthritis, systemic lupus | erythematosis, multiple sclerosis   | and/or as described below) and   | immunodeficiencies (e.g., as       | described below). Preferred         | indications include anemia,        | pancytopenia, leukopenia,      | thrombocytopenia, Hodgkin's       | disease, acute lymphocytic anemia | (ALL), plasmacytomas, multiple | myeloma, Burkitt's lymphoma,         | arthritis, AIDS, granulomatous    | disease, inflammatory bowel disease, | sepsis, neutropenia, neutrophilia,  | psoriasis, suppression of immune | reactions to transplanted organs and | tissues, hemophilia, | hypercoagulation, diabetes mellitus, | ÷. | Disease. An additional preferred |
| macrophages and mast cells. Such    | assays that may be used or routinely | modified to test immunomodulatory     | activity of polypeptides of the | invention (including antibodies and | agonists or antagonists of the      | invention) include the assays   | disclosed in Miraglia et al., J | Biomolecular Screening 4:193-204  | (1999); Rowland et al.,         | "Lymphocytes: a practical approach" | Chapter 6:138-160 (2000); Gonzalez | et al., J Clin Lab Anal 8(5):277-283 | (1194); Yssel et al., Res Immunol | 144(8):610-616 (1993); Bagley et al., | Nat Immunol 1(3):257-261 (2000);   | and van der Graaff et al.,        | Rheumatology (Oxford) 38(3):214-     | 220 (1999), the contents of each of | which are herein incorporated by | reference in its entirety. Human T | cells that may be used according to | these assays may be isolated using | techniques disclosed herein or | otherwise known in the art. Human | T cells are primary human         | lymphocytes that mature in the | thymus and express a T cell receptor | and CD3, CD4, or CD8. These cells | mediate humoral or cell-mediated     | immunity and may be preactivated to | enhance responsiveness to        | immunomodulatory factors.            |                      |                                      |    |                                  |
|                                     |                                      |                                       |                                 |                                     |                                     |                                 |                                 |                                   |                                 |                                     |                                    |                                      |                                   |                                       |                                    |                                   |                                      |                                     |                                  |                                    |                                     |                                    |                                |                                   |                                   |                                |                                      |                                   |                                      |                                     |                                  |                                      |                      |                                      |    |                                  |

J | Assays for measuring expression of VCAM are well-known in the art and may be used or routinely modified to assess the ability of polypendes of mercuinof including ambodies and aganists or antiganists of the invention (not regulate VCAM invention) to regulate VCAM or aganism or accomplete VCAM or and the proposition. For example, PMA/I may be used to meature the CAM or appealation of cell surface VCAM or and the proposition of the large are cells that line objects said on a modified and in the blood vessels, and are involved in function that include, but are not limited to.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| permeability, vascular tone, and manner cell extravastion. Exemplary endobtelial cells that may be used according to these assays include lumma umbitient vein a variable from commercial sources. The expression of VCAM (2016b), a memberne-associated protein, can be tupergallated by colorisms or other friends, and courtibutes to the extravassion of bymphospites, leucocytes and other manner cells from those vessels; thus VCAM expression plays a color immune cells from those vessels; thus VCAM expression plays as the world of the contraction of bymphospites, leucocytes and other manner cells from those vessels; thus VCAM expression plays as to inflammation repression plays as the inflammation repression plays as the inflammation repression plays as the inflammation responses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | are swell-known in the art and may be well-known in the art and may be and motivated and routinely modified to assess ability of polypeptides of the invention to inhibit or activate of such an assay follows; Cells were pretreated as the MSD supermains or controls for 15-18 hours. SIAA eacivity was massive and the supermeated and explinely also may be a supplied to hour SIAA and of the supplied to hour SIAA and and epithelial colon adenocations are epithelial colon adenocations are epithelial colon adenocations are epithelial colon adenocations of particular supplied for studies on the mechanism of for studies on the mechanism of for studies on the mechanism of supplied and supplied to the contents of the supplied of the contents of which are remain incorporated by reference in its entirety. |

| II6 FMAT. II6 is produced by T<br>cells and has somege effects on B<br>cells. II6 puricipates in II1<br>direct elig production and increases<br>light production (16x plays a robe in<br>moseal immanie). II6 induces<br>cyotoxic T cells. Dereguland<br>produces, and chronic maniera of<br>suppreproliferative diseases, plasmacyomis,<br>hyperproliferative diseases. Assays<br>the frammonopulation yand<br>differentiation fiscus proteins<br>produced by a large variety of cells<br>when the expression (et lis strongly<br>regulated by cyotikines, growth<br>feders, and may be used of<br>known in the str and may be used or                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | continuely modified to assess the ability of polypeptides of the ability of polypeptides of the ability of polypeptides of the against or antagonists of the immunomodulation and modified the immunomodulation and finetion and modified real polyperapides of polypeptides of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the ability of the authority of and differentiation activity of any office and appendix of the anivolation (modifuling appendix of the anivolation activity of appendix of the anivolation activity of appendix of the anivolation (modifuling agonists or                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| production. A highly preferred     | infectious disease as described below | under "Infectious Disease"). | Additional highly preferred | indications include inflammation and | inflammatory disorders. Preferred | indications include blood disorders | (e.g., as described below under     | "Immune Activity", "Blood-Related | Disorders", and/or "Cardiovascular | Disorders"). Highly preferred | indications include autoimmune     | diseases (e.g., rheumatoid arthritis, | systemic lupus erythematosis,     | multiple sclerosis and/or as described | below) and immunodeficiencies (e.g., | as described below). Preferred        | indications also include anemia,      | pancytopenia, leukopenia,              | thrombocytopenia, Hodgkin's   | disease, acute lymphocytic anemia | (ALL), plasmacytomas, multiple      | myeloma, Burkitt's lymphoma, | arthritis, AIDS, granulomatous  | disease, inflammatory bowel disease, | sepsis, neutropenia, neutrophilia, | psoriasis, suppression of immune   | reactions to transplanted organs and | tissues, hemophilia,             | hypercoagulation, diabetes mellitus, | endocarditis, meningitis (bacterial | and viral), Lyme Disease, asthma, | and allergy Preferred indications | also include neoplastic diseases (e.g., | leukemia, lymphoma, and/or as          | described below under               |
| the ability of polypeptides of the | agonists or antagonists of the        | invention) to mediate        | immunomodulation, induce    | chemotaxis, and modulate immune      | cell activation. Exemplary assays | that test for immunomodulatory      | proteins evaluate the production of | cell surface markers, such as     | monocyte chemoattractant protein   | (MCP), and the activation of  | monocytes and T cells. Such assays | that may be used or routinely         | modified to test immunomodulatory | and diffferentiation activity of       | polypeptides of the invention        | (including antibodies and agonists or | antagonists of the invention) include | assays disclosed in Miraglia et al., J | Biomolecular Screening 4:193- | 204(1999); Rowland et al.,        | "Lymphocytes: a practical approach" | Chapter 6:138-160 (2000);    | Satthaporn and Eremin, J R Coll | Surg Ednb 45(1):9-19 (2001); and     | Verhasselt et al., J Immunol       | 158:2919-2925 (1997), the contents | of each of which are herein          | incorporated by reference in its | entirety. Human dendritic cells that | may be used according to these      | assays may be isolated using      | techniques disclosed herein or    | otherwise known in the art. Human       | dendritic cells are antigen presenting | cells in suspension culture, which, |
|                                    |                                       |                              |                             |                                      |                                   |                                     |                                     |                                   |                                    |                               |                                    |                                       |                                   |                                        |                                      |                                       |                                       |                                        |                               |                                   |                                     |                              |                                 |                                      |                                    |                                    |                                      |                                  |                                      |                                     |                                   |                                   |                                         |                                        |                                     |

| "Hyperprolliferative Disorders").  High preferred indications include neopleaens and cancers, such as, ferred including the conference, such as, ferred in the colon, panceratic, breast, lung, colon, panceratic, breast, lung, colon, panceratic, breast, lung, colon, panceratic, brain, liver, and uninary cancer. Other preferred indications include bening in conference indications include bening in conglishic conditions, such as, for neopleastic conditions, such as, for example, hyporphisai, metaphissia, and or dysplasia. | A highly preferred emboliment of the invention includes a method of a simulating MID 18 production. An alternative highly preferred includes a method for including of a method for including (e.g., stephenson, production, and a method for including (e.g., stephenson, production, production, and including of a microrion (e.g., an infection disease as described below under "Infections Bissase"). Preferred indications include blood discovers (e.g., as a described below under "Immune Arthry"). Bloodorfer (e.g., as described below under "Immune Arthry"). Bloodorfers (e.g., as described below under "Immune Diseases). Amotor "Cardiovascult" Diseases (e.g., Immune and Train and Or "Cardiovascult" Diseases (e.g., Immunodio affairies), systemic hipse expleminosis, mintiple schensos and or se described below) and immunodio-diseases (e.g., Immunodio affairies) include highly preferred indications include highly preferred indications include highly preferred indications include inflammation and immunosory diseaseds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| emorporated by reference in the emorporated by reference in the emorphism of a school of the form of the ATC'N'. Exemplary human mast cold in the map we losed soon of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of a patient human mast cell the school of a patient with must cell teakernit, and exhibits must chance the school of a patient with must cell teakernit, and exhibits must chance the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the school of the schoo | sayes for the gentlation (i.e., increases) or decreases) of viability and proliferation or cleals in vitum are well-known in the art and may be used or routinely modified to assess the ability of polyperdides of the mention (including antibodes and mention) to regulate whellity and organise or anapolication of pre-adionse cells and ell lines. For example, the cell function of the mention of the medical polyperdides of the invention) to regulate whellity and cell lines. For example, the cell function of the medical polyperdides of the medical polyperdides of the medical polyperdides of the medical polyperdides of the medical polyperdides of the medical polyperdides of the medical polyperdides of mentionically active collure based on quantitation of the presence of mentionically active continuous sharing of \$173\$ flipols active continuous sharing of \$173\$ flipols active cells developed through cells and adpose cells asteried to an adpose lets asteried to an adpose like state. |

For example, Isadii secretion is measured by FMAT secretion is measured by FMAT secretion. For example, Isadii secretion from pancenic beat also by certain protein-leptides, and also by certain protein-leptides, and also by certain protein-leptides, and also by certain protein-leptides, and also by certain protein-leptides, and dishees. Excepting uses, sitem and also properpicates of the invention for inhaling secretion from pancenic (ed.) by polypeptides of the invention includes and against or anattagonists of the invention include at Frober 1 4773 NGL 970000.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| regulate caspase protease-mediated | apoptosis in immune cells (such as, | for example, in mast cells). Mast | cells are found in connective and | mucosal tissues throughout the body, | and their activation via | immunoglobulin E -antigen, | promoted by T helper cell type 2 | cytokines, is an important component | of allergic disease. Dysregulation of | mast cell apoptosis may play a role in | allergic disease and mast cell tumor | survival. Exemplary assays for | caspase apoptosis that may be used | or routinely modified to test capase | apoptosis activity induced by | polypeptides of the invention | (including antibodies and agonists or | antagonists of the invention) include | the assays disclosed in: Masuda A, et | al., J Biol Chem, 276(28):26107- | 26113 (2001); Yeatman CF 2nd, et | al., J Exp Med, 192(8):1093-1103 | (2000);Lee et al., FEBS Lett 485(2- | 3): 122-126 (2000); Nor et al., J Vasc | Res 37(3): 209-218 (2000); and | Karsan and Harlan, J Atheroscler | Thromb 3(2): 75-80 (1996); the | contents of each of which are herein | incorporated by reference in its | entirety. Immune cells that may be | used according to these assays are | publicly available (e.g., through | commercial sources). Exemplary | immune cells that may be used | according to these assays include | mast cells such as the HMC human |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | stassys for measuring estaining that are well-known in the art and may be add or routinely notified to assess the shilty of polygopides of the selection of the control (including authorities and agontists or antagonists of the mirroration) to mobilize estainm. For example, the FLPR assay may be used to measure influx or cleation. Use the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of calcium. Extracellular estainm is the control of calcium, Federal and finders or an antibut of calcium, proposed and alterations in cell fundrious. Exemplary assays that may be used or routinely undired on polypopides of the invention included manages disclosed in Saint S. et al., Enderringon; 15(11), 5(2), 5(2), 5(2), 5(3), 5(3), 5(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4), 7(4),  |

| the skilling of notamentides of the | invention (including antibodies and | agonists or antagonists of the  | invention) to promote or inhibit cell | proliferation, activation, and       | differentiation. Exemplary assays for | ERK kinase activity that may be used | or routinely modified to test ERK | kinase-induced activity of | polypeptides of the invention | (including antibodies and agonists or | antagonists of the invention) include | the assays disclosed in Forrer et al., | Biol Chem 379(8-9):1101-1110 | (1998); Berra et al., Biochem           | Pharmacol 60(8):1171-1178 (2000);    | Gupta et al., Exp Cell Res | 247(2):495-504 (1999); Chang and | Karin, Nature 410(6824):37-40     | (2001); and Cobb MH, Prog Biophys   | Mol Biol 71(3-4):479-500 (1999);  | the contents of each of which are | herein incorporated by reference in | its entirety. Endothelial cells that | may be used according to these | assays are publicly available (e.g., | through the ATCCTM). Exemplary | endothelial cells that may be used | according to these assays include | human umbilical vein endothelial       | cells (HUVEC), which are    | endothelial cells which line venous | blood vessels, and are involved in | functions that include, but are not | limited to, angiogenesis, vascular | permeability, vascular tone, and | immune cell extravasation,   |
|                                     |                                     |                                 |                                       |                                      |                                       |                                      |                                   |                            |                               |                                       |                                       |                                        |                              |                                         |                                      |                            |                                  |                                   |                                     |                                   |                                   |                                     |                                      |                                |                                      |                                |                                    |                                   |                                        |                             |                                     |                                    |                                     |                                    |                                  |                              |
|                                     |                                     |                                 |                                       |                                      |                                       |                                      |                                   |                            |                               |                                       |                                       |                                        |                              |                                         |                                      |                            |                                  |                                   |                                     |                                   |                                   |                                     |                                      |                                |                                      |                                |                                    |                                   |                                        |                             |                                     |                                    |                                     |                                    |                                  | _                            |

|  | alternative highly preferred                                        |
|--|---------------------------------------------------------------------|
|  | includes a method for inhibiting                                    |
|  | angiogenesis. A highly                                              |
|  | preferred embodiment of the                                         |
|  | invention includes a method for<br>reducing cardiac hypertrophy. An |
|  | alternative highly preferred                                        |
|  | embodiment of the invention                                         |
|  |                                                                     |
|  | cardiac hypertrophy. Highly                                         |
|  | preferred indications include                                       |
|  | neoplastic diseases (e.g., as described                             |
|  | below under "Hyperproliferative                                     |
|  | Disorders"), and disorders of the                                   |
|  | cardiovascular system (e.g., heart                                  |
|  | disease, congestive heart failure,                                  |
|  | hypertension, aortic stenosis,                                      |
|  | cardiomyopathy, valvular                                            |
|  | regurgitation, left ventricular                                     |
|  | dysfunction, atherosclerosis and                                    |
|  | atherosclerotic vascular disease,                                   |
|  | diabetic nephropathy, intracardiac                                  |
|  | shunt, cardiac hypertrophy,                                         |
|  | myocardial infarction, chronic                                      |
|  | hemodynamic overload, and/or as                                     |
|  | described below under                                               |
|  | "Cardiovascular Disorders"). Highly                                 |
|  | preferred indications include                                       |
|  | cardiovascular, endothelial and/or                                  |
|  | angiogenic disorders (e.g., systemic                                |
|  | disorders that affect vessels such as                               |
|  | diabetes mellitus, as well as diseases                              |
|  | of the vessels themselves, such as of                               |
|  | the arteries, capillaries, veins and/or                             |
|  | lymphatics). Highly preferred are                                   |
|  | indications that stimulate                                          |

|  |   | anciogenesis and/or                    |
|--|---|----------------------------------------|
|  |   | cardiovascularization. Highly          |
|  |   | preferred are indications that inhibit |
|  |   | angiogenesis and/or                    |
|  |   | cardiovascularization. Highly          |
|  |   | preferred indications include          |
|  |   | antiangiogenic activity to treat solid |
|  | _ | tumors, leukemias, and Kaposi"s        |
|  | - | sarcoma, and retinal disorders.        |
|  |   | Highly preferred indications include   |
|  | _ | neoplasms and cancer, such as,         |
|  |   | Kaposi"s sarcoma, hemangioma           |
|  | _ | (capillary and cavernous), glomus      |
|  | _ | tumors, telangiectasia, bacillary      |
|  |   | angiomatosis,                          |
|  | _ | hemangioendothelioma,                  |
|  | - | angiosarcoma,                          |
|  | _ | haemangiopericytoma,                   |
|  | _ | lymphangioma, lymphangiosarcoma.       |
|  | _ | Highly preferred indications also      |
|  | _ | include cancers such as, prostate,     |
|  | _ | breast, lung, colon, pancreatic,       |
|  | _ | esophageal, stomach, brain, liver,     |
|  |   | and urinary cancer. Preferred          |
|  |   | indications include benign             |
|  | _ | dysproliferative disorders and pre-    |
|  | _ | neoplastic conditions, such as, for    |
|  |   |                                        |
|  |   | and/or dysplasia. Highly               |
|  |   | preferred indications also include     |
|  |   | arterial disease, such as,             |
|  | - | atherosclerosis, hypertension,         |
|  |   | coronary artery disease,               |
|  |   | inflammatory vasculitides,             |
|  | _ | Reynaud"s disease and Reynaud"s        |
|  | _ | phenomenom, aneurysms, restenosis;     |
|  |   | venous and lymphatic disorders such    |

|  |   | as thrombophlebitis, lymphangitis,     |
|--|---|----------------------------------------|
|  |   | and lymphedema; and other vascular     |
|  |   | disorders such as peripheral vascular  |
|  |   | disease, and cancer. Highly            |
|  | _ | preferred indications also include     |
|  | _ | trauma such as wounds, burns, and      |
|  |   | injured tissue (e.g., vascular injury  |
|  |   | such as, injury resulting from balloon |
|  |   | angioplasty, and atheroschlerotic      |
|  |   | lesions), implant fixation, scarring,  |
|  |   | ischemia reperfusion injury,           |
|  |   | rheumatoid arthritis, cerebrovascular  |
|  |   | disease, renal diseases such as acute  |
|  | _ | renal failure, and osteoporosis.       |
|  |   | Additional highly preferred            |
|  |   | indications include stroke, graft      |
|  | _ | rejection, diabetic or other           |
|  | _ | retinopathies, thrombotic and          |
|  |   | coagulative disorders, vascularitis,   |
|  |   | lymph angiogenesis, sexual             |
|  |   | disorders, age-related macular         |
|  |   | degeneration, and treatment            |
|  | _ | /prevention of endometriosis and       |
|  |   | related conditions. Additional highly  |
|  | _ | preferred indications include          |
|  |   | fibromas, heart disease, cardiac       |
|  |   | dis                                    |
|  |   | vascular disease. Preferred            |
|  |   | indications include blood disorders    |
|  | _ | (e.g., as described below under        |
|  | _ | "Immune Activity", "Blood-Related      |
|  | _ | Disorders", and/or "Cardiovascular     |
|  |   | Disorders"). Preferred indications     |
|  |   | include autoimmune diseases (e.g.,     |
|  |   | rheumatoid arthritis, systemic lupus   |
|  | _ | erythematosis, multiple sclerosis      |
|  |   | and/or as described below) and         |

|     |         |     |                         | JINK and pas kinase activity that may         | rneumatoid artnritis, systemic lupus   |
|-----|---------|-----|-------------------------|-----------------------------------------------|----------------------------------------|
|     |         |     |                         | be used or routinely modified to test         | erythematosis, multiple sclerosis      |
|     |         |     |                         | JNK and p38 kinase-induced activity           | and/or as described below) and         |
|     |         |     |                         | of polypeptides of the invention              | immunodeficiencies (e.g., as           |
|     |         |     |                         | (including antibodies and agonists or         | described below). Additional highly    |
|     |         |     |                         | antagonists of the invention) include         | preferred indications include          |
|     |         |     |                         | the assays disclosed in Forrer et al.,        | inflammation and inflammatory          |
|     |         |     |                         | Biol Chem 379(8-9):1101-1110                  | disorders. Highly preferred            |
|     |         |     |                         | (1998); Gupta et al., Exp Cell Res            | indications also include neoplastic    |
|     |         |     |                         | 247(2): 495-504 (1999); Kyriakis              | diseases (e.g., leukemia, lymphoma,    |
|     |         |     |                         | JM, Biochem Soc Symp 64:29-48                 | and/or as described below under        |
|     |         |     |                         | (1999); Chang and Karin, Nature               | "Hyperproliferative Disorders").       |

| permethility, viscular tone, and minmure cell extravastion. Exemplary endothelial cells that may be used according to these assays include human unabilities usin endothelial cells (HUVEC), which sear awaither from commercial sources. The expression of VCAM, COTHOs, a member assays and protein, can be tupegaliated by optoxines or dother factors, and contributes to the extravastation of hymphocytes, lean-extravastion of hymphocytes, lean-extravastion of minmure cells from blood vessels, thus VCAM expression plays a node minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure and minmure an | Assays for measuring accretion of insulin are well-known in the art and may be used or notmetry modified to assess the ability of polygopides of the invention (including multhodies of the invention) to simulate managemiss of the invention to simulate insulin accretion. For example, insulin ascerction for example, insulin ascerction from panceatic between the ability of the properties of the international properties of the international production of the properties of the properties of the properties of the properties of the production of the properties of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the production of the prod |

|   | concentrations of cytosonic calcum | compared to much higher             | extracellular calcium. Extracellular  | factors can cause an influx of  | calcium, leading to activation of   | calcium responsive signaling | pathways and alterations in cell  | functions. Exemplary assays that | may be used or routinely modified to | measure calcium flux by   | polypeptides of the invention        | (including antibodics and agonists or | antagonists of the invention) include | assays disclosed in: Satin LS, et al., | Endocrinology, 136(10):4589-601 | (1995);Mogami H, et al.,       | Endocrinology, 136(7):2960-6  | (1995); Richardson SB, et al., | Biochem J, 288 ( Pt 3):847-51          | (1992); and, Meats, JE, et al., Cell | Calcium 1989 Nov-Dec;10(8):535-41   | (1989), the contents of each of which | is herein incorporated by reference in | its entirety. Pancreatic cells that may | be used according to these assays are  | publicly available (e.g., through the | ATCC <sup>TM</sup> ) and/or may be routinely | generated. Exemplary pancreatic        | cells that may be used according to  | these assays include HITT15 Cells.   | HITT15 are an adherent epithelial  | cell line established from Syrian | hamster islet cells transformed with | SV40. These cells express glucagon, | somatostatin, and glucocorticoid    | receptors. The cells secrete insulin, | which is stimulated by glucose and |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|  | th. | the art. | Neurological Diseases"), and           |
|--|-----|----------|----------------------------------------|
|  |     |          | infection (e.g., as described below    |
|  |     |          | under "Infectious Disease"). A         |
|  |     |          | highly preferred indication is         |
|  |     |          | diabetes mellitus. An                  |
|  |     |          | additional highly preferred indication |
|  |     |          | is a complication associated with      |
|  |     |          | diabetes (e.g., diabetic retinopathy,  |
|  |     |          | diabetic nephropathy, kidney disease   |
|  |     |          | (e.g., renal failure, nephropathy      |
|  |     |          | and/or other diseases and disorders as |
|  |     |          | described in the "Renal Disorders"     |
|  |     |          | section below), diabetic neuropathy,   |
|  |     |          | nerve disease and nerve damage (e.g.,  |
|  |     |          | due to diabetic neuropathy), blood     |
|  |     |          | vessel blockage, heart disease,        |
|  |     |          | stroke, impotence (e.g., due to        |
|  |     |          | diabetic neuropathy or blood vessel    |
|  |     |          | blockage), seizures, mental            |
|  |     |          | confusion, drowsiness, nonketotic      |
|  |     |          | hyperglycemic-hyperosmolar coma,       |
|  |     |          | cardiovascular disease (e.g., heart    |
|  |     |          | disease, atherosclerosis,              |
|  |     |          | microvascular disease, hypertension,   |
|  |     |          | stroke, and other diseases and         |
|  |     |          | disorders as described in the          |
|  |     |          | "Cardiovascular Disorders" section     |
|  |     |          | below), dyslipidemia, endocrine        |
|  |     |          | disorders (as described in the         |
|  |     |          | "Endocrine Disorders" section          |
|  |     |          | below), neuropathy, vision             |
|  |     |          | impairment (e.g., diabetic retinopathy |
|  |     |          | and blindness), ulcers and impaired    |
|  |     |          | wound healing, infection (e.g.,        |
|  |     |          | infectious diseases and disorders as   |
|  |     |          | described in the "Infectious           |
|  |     |          | Diseases" section below, especially    |

| of the urnary tract and skin), carpal turnel syndrome and Dypuytren's courteeture). An additional highly pretructed indication is obesity and/or complications associated with obesity. Additional highly preferred indications include weight loss or allermatively world rain.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| kichtoy cencer. Additional highly preferred indications include melanoma, prostact, lang melanoma, prostact, lang beneratic, esophicagi, isomach, benin, liver, and uniany cancer. Over preferred indications include bening dyspoliterative disorders and pre-neoplastic conditions, such as, of example, hyperplassis, metaphasia, and of dysplassia.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| A preferred embodiment of the | invention includes a method for | inhibiting (e.g., reducing) TNF alpha | production. An alternative preferred | embodiment of the invention      | ncludes a method for stimulating | (e.g., increasing) TNF alpha          | production. Preferred indications | include blood disorders (e.g., as | described below under "Immune | Activity", "Blood-Related | Disorders", and/or "Cardiovascular | Disorders"), Highly preferred      | ndications include autoimmune             | liseases (e.g., rheumatoid arthritis,     | systemic lupus erythematosis, | Crohn"s disease, multiple sclerosis | and/or as described below), | immunodeficiencies (e.g., as             | described below), boosting a T cell- | nediated immune response, and | suppressing a T cell-mediated | mmune response. Additional highly | preferred indications include | nflammation and inflammatory | disorders, and treating joint damage | in patients with rheumatoid arthritis. | An additional highly preferred | ndication is sepsis. Highly | preferred indications include | reoplastic diseases (e.g., leukemia, | ymphoma, and/or as described               | below under "Hyperproliferative    | Disorders"). Additionally, highly     | preferred indications include  | neoplasms and cancers, such as, for<br>example, leukemia, lymphoma, |

| include blood disorders (e.g., as | Activity" "Blood-Related                                          | Disorders", and/or "Cardiovascular | Disorders"). Preferred indications    | include autoimmune diseases (e.g., | rheumatoid arthritis, systemic lupus | erythematosis, multiple selerosis    | and/or as described below) and      | immunodeficiencies (e.g., as      | described below). Preferred     | indications include neoplastic       | discases (e.g., leukemia, lymphoma, | melanoma, prostate, breast, lung, | colon, pancreatic, esophageal, | stomach, brain, liver, and urinary    | tract cancers and/or as described     | below under "Hyperproliferative    | Disorders"). Other preferred    | indications include benign | dysproliferative disorders and pre-  | neoplastic conditions, such as, for | example, hyperplasia, metaplasia, | and/or dysplasia. Preferred | indications include anemia,   | pancytopenia, leukopenia,     | thrombocytopenia, leukemias,       | Hodgkin's disease, acute            | lymphocytic anemia (ALL),           | plasmacytomas, multiple myeloma,     | Burkitt's lymphoma, arthritis, AIDS, | granulomatous disease, inflammatory | bowel disease, sepsis, neutropenia,   | neutrophilia, psoriasis, suppression   | of immune reactions to transplanted | organs and tissues, hemophilia, | hypercoagulation, diabetes mellitus, |
| element are well-known in the art | and may be used or routinely<br>modified to assess the ability of | polypeptides of the invention      | (including antibodies and agonists or | antagonists of the invention) to   | regulate GATA3 transcription factors | and modulate expression of mast cell | genes important for immune response | development. Exemplary assays for | transcription through the GATA3 | response element that may be used or | routinely modified to test GATA3-   | response element activity of      | polypeptides of the invention  | (including antibodies and agonists or | antagonists of the invention) include | assays disclosed in Berger et al., | Gene 66:1-10 (1998); Cullen and | Malm, Methods in Enzymol   | 216:362-368 (1992); Henthorn et al., | Proc Natl Acad Sci USA 85:6342-     | 6346 (1988); Flavell et al., Cold | Spring Harb Symp Quant Biol | 64:563-571 (1999); Rodriguez- | Palmero et al., Eur J Immunol | 29(12):3914-3924 (1999); Zheng and | Flavell, Cell 89(4):587-596 (1997); | and Henderson et al., Mol Cell Biol | 14(6):4286-4294 (1994), the contents | of each of which are herein          | incorporated by reference in its    | entirety. Mast cells that may be used | according to these assays are publicly | available (e.g., through the        | ATCCTM). Exemplary human mast   | cells that may be used according to  |
|                                   |                                                                   |                                    |                                       |                                    |                                      |                                      |                                     |                                   |                                 |                                      |                                     |                                   |                                |                                       |                                       |                                    |                                 |                            |                                      |                                     |                                   |                             |                               |                               |                                    |                                     |                                     |                                      |                                      |                                     |                                       |                                        |                                     |                                 |                                      |

| Kinase assay. Kinase assays, for | example an Elk-1 kinase assay, for<br>FRK eignal transduction that regulate | cell proliferation or differentiation | are well known in the art and may be | used or routinely modified to assess | the ability of polypeptides of the  | invention (including antibodies and | agonists or antagonists of the      | invention) to promote or inhibit cell  | proliferation, activation, and  | differentiation. Exemplary assays for | ERK kinase activity that may be used | or routinely modified to test ERK | kinase-induced activity of         | polypeptides of the invention   | (including antibodics and agonists or | antagonists of the invention) include | the assays disclosed in Forrer et al., | Biol Chem 379(8-9):1101-1110    | (1998); Le Marchand-Brustel Y, Exp  | Clin Endocrinol Diabetes        | 107(2):126-132 (1999); Kyriakis JM, | Biochem Soc Symp 64:29-48 (1999); | Chang and Karin, Nature             | 410(6824):37-40 (2001); and Cobb | MH, Prog Biophys Mol Biol 71(3-   | 4):479-500 (1999); the contents of | each of which are herein         | incorporated by reference in its | entirety. Mouse adipocyte cells that | may be used according to these      | assays are publicly available (e.g., | through the ATCCTM). Exemplary         | mouse adipocyte cells that may be | used according to these assays      | include 3T3-L1 cells. 3T3-L1 is an |

|     | HSDSB09 | 909 | Activation of         | This reporter assay measures            | Highly preferred indications include   |
| 202 |         |     | transcription through | activation of the GATA-3 signaling      | allergy, asthma, and rhinitis.         |
|     |         |     | GATA-3 response       | pathway in HMC-1 human mast cell        | Additional preferred indications       |
|     |         |     | element in immune     | line. Activation of GATA-3 in mast      | include infection (e.g., an infectious |

| disease as described below under      | "Infectious Disease"), and       | inflammation and inflammatory   | disorders. Preferred indications also | include blood disorders (e.g., as | described below under "Immune | Activity", "Blood-Related         | Disorders", and/or "Cardiovascular | Disorders"). Preferred indications    | include autoimmune diseases (e.g., | rheumatoid arthritis, systemic lupus | erythematosis, multiple sclerosis    | and/or as described below) and      | immunodeficiencies (e.g., as      | described below). Preferred     | indications include neoplastic       | discases (e.g., leukemia, lymphoma, | melanoma, prostate, breast, lung, | colon, pancreatic, esophageal, | stomach, brain, liver, and urinary    | tract cancers and/or as described     | below under "Hyperproliferative    | Disorders"). Other preferred    | indications include benign | dysproliferative disorders and pre-  | neoplastic conditions, such as, for | example, hyperplasia, metaplasia, | and/or dysplasia. Preferred | indications include anemia,   | pancytopenia, leukopenia,     | thrombocytopenia, leukemias,       | Hodgkin's disease, acute            | lymphocytic anemia (ALL),           | plasmacytomas, multiple myeloma,     | Burkitt's lymphoma, arthritis, AIDS, | granulomatous disease, inflammatory | bowel disease, sepsis, neutropenia,   |
